

İlk olarak aşağıdaki verdiğim Kodları bir notepad dosyası açarak içine yapııştırıyorum.

```
@echo off
```

```
Title Checking Internet Connection & Mode 70,4 & color 0B
```

```
::-----
```

```
REM First We Check The Status Of The Internet Connection
```

```
Call :Check_Connection
```

```
::-----
```

```
:Main
```

```
Title Your Extrenal IP Address
```

```
Mode 50,4 & Color 0A
```

```
for /f "tokens=2 delims=" %%A in (
```

```
'nslookup myip.opendns.com. resolver1.opendns.com 2^>NUL^|find "Address:" ^| findstr /v "208.67.222.222"'
```

```
) Do (
```

```
    If "%%A" NEQ "127.0.0.1" (
```

```
        set "ExtIP=%%A"
```

```
    ) else (
```

```
        Color 0C & echo(
```

```
        echo          No internet connection !
```

```
    )
```

```
)
```

```
echo(
```

```
If defined ExtIP (
```

```
    echo    You are connected to the internet !
```

```
    echo    Your External IP is : %ExtIP%
```

```
)
```

```
Pause>nul & Exit
```

```
::-----
```

```
:Check_Connection
```

```
Title Checking Internet Connection ...
```

```

Notepad dosyamı farklı kaydet diyerek internet\_kontrol.bat adında masaüstü konumuna kayıt ediyorum.

İlgili bat dosyam masaüstüne kayıt oldu.

Sonraki adımda dosyama çift tıklayarak hem internet bağlantımı kontrol etmiş oluyorum hemde public ( dış ip ) adresimi öğrenmiş oluyorum.
